Subject: Dunoon Dam

Please stop the plans going ahead building a dam in the beautiful Channon/Dunoon valley. We understand the value of water and the need for it in such a rapidly developing region, but there are many other ways to increase water supply in a drying climate. Let's follow the Sydney strategy - supplying tens of thousands of people with water - without any new dam or expansion of existing dams. (You know what im talking about - without going into a long winded detail about what they did.) So please, consider all other options before even thinking about building a billion dollar environmental disaster! Best Regards, [REDACTED] (On behalf of myself and all other Dunoon residents.)
